Dear Commissioner McAllister:

We are writing you in strong support of the California Lighting Technology Center (CLTC), University of California, Davis, a public-private partnership that has evolved over the last decade. This partnership grew out of a close collaboration between the lighting industry, California's investor owned utilities and the California Energy Commission to support a broad programmatic research, demonstration, education and training project portfolio.

We have collaborated with CLTC on the design and development of the LED lighting system for the Honda Smart Home demonstration project that we built at the West Village community in Davis.

Although our work together was on a specific tangible project, we understand that CLTC is very effective in addressing and resolving lighting-related issues that impede progress toward state energy goals. A significant part of CLTC's success is due to the integrated and harmonized activities that bring together education, research and codes and standards activities. We strongly encourage this integrated approach.

Investing in CLTC and research centers that use a similar model presents the opportunity to effectively integrate and address long-term energy efficiency issues that cannot be obtained through individual project solicitations in different activity areas and at different times.

Sincerely,

Michael Koenig Project Leader, Honda Smart Home US
